**SENSOGAN®**

Offers a reduced copper content combined with manganese. This combination results in a smooth and well regulated oxidation process, causing slow and steady salivation. Tests show a very positive influence on the horse's satisfaction, motivation and willingness to perform.

**SENSOGAN®** bits are marked with a black ring at the cheeks. The arrow must always be on the left hand side pointing forward for a proper fit.

**KK ULTRA DESIGN**

Based on research from the veterinary university in Hanover. After extensive study, the middle link has been shortened and the angle has been twisted by 45 degrees for the best possible effect without severity.

**DYNAMIC RS**

Based on research from the veterinary university in Hanover. After extensive study, the middle link has been shortened and the angle has been twisted by 45 degrees for the best possible effect without severity.

**WH ULTRA BITS**

Developed by Herm Sprenger together with Lisa Wilcox and Ernst Hoyos, this double-jointed bit features a unique roller in the center section, which provides gentle stimulation to the tongue. It encourages the horse to chew, prompting salivation, acceptance of the bit and relaxation of the jaw.
